★ SKILLS AND TOOLS

Languages: C/C++, Java, JavaScript, Python, SQL
Technologies: Git, CMake, Clang Asan, GCP, Docker, React, NodeJS

⚑ WORK EXPERIENCE

Cloud Database Software Developer   Sept 2020 – Dec 2020

SAP Labs Waterloo

- </> Introduced **SSH port forwarding** to the testing infrastructure to run end to end tests on our **Docker-**based distributed database IQ
- </> Owned and implemented the login policy segregation feature with **SQL** and **C++** which allows SAP to control customer login requirements and respect privacy on **100+** production IQ deployments
- </> Identified and redesigned the IQ login process to remove a security vulnerability affecting **all** IQ users
- </> Received approval for a technical document I wrote, outlining the necessary behaviour and implementation changes for the above feature

Client Interfaces Database Software Developer   Jan 2020 – Apr 2020

SAP Labs Waterloo

- </> Designed and wrote a multi-platform **C++ Wireshark** plugin for dissecting SAP HANA protocol (**TCP-**based) packets to help developers resolve customer escalations faster
- </> Identified performance improvements by writing performance tests and implemented them, leading to a **10%** faster fetch time using the HANA command line interface
- </> Developed a new **Java** software pipeline to record failed CI tests and track failure frequencies to reduce developer root cause determination time
- </> Identified memory leaks with **Clang Asan** and proposed an improved behaviour for lob queries which enables faster bounded lob fetches

Software Developer   May 2019 - Aug 2019

Cisco Systems Canada

- </> Built a **React** web tool with **Flask** from scratch to configure and compare **Google RPC** and **Model Driven Telemetry** router outputs featuring conditional rendering and dynamic front-end JSON file construction
- </> Introduced **multithreading** for router connections to reduce testcase setup time by **70%**
- </> Wrote **Pytest** unit tests/test cases to verify parsing accuracy, **IPv6 segment routing** behavior and **BGP** and **Bundle** statuses

⚙ FAVOURITE PROJECTS

KPopify 🔗   August 2020

- </> A specialized **GCP**-deployed platform for watching Kpop music videos and creating playlists. Implemented all changes needed in the stack for the search results feature with **Node**, **PostgresDB** and **React**.

GoSushi 🔗   August 2020

- </> Remake of SushiGo! board game. Conceptualized and implemented **React-Spring** card animations and introduced stateful player reconnection to the **Socket.io** server. Deployed here!
